

we added the energy of wood to light

5wood
AYDINLATMA

Our lighting fixture adventure started in early 2005 in Istanbul Topçular with the production of Oval and T5 band fixtures, especially for chain markets. In the process that continued with the design, production and application of project and design-based track spotlights, workshop and LED exterior lighting fixtures, we added natural wood furniture production to our portfolio in 2010 with our innovative approach, internalizing the dynamics, technological developments and especially the needs of both sectors, and with our knowledge and experience, we produced a series of natural wood fixtures that we consider to be the most natural and aesthetic form of the lighting & decoration combination.

We continue to work for healthier spaces that can breathe,
to add the unique aesthetics of natural wood to the quality of lighting,
to spread the positive energy of nature to your environments,
to add the timelessness of nature to today's digitalized decoration approach,
which will never go out of fashion...

Why Wood ?

The positive effects of wooden details, which can be used in our homes, offices, hotels, restaurants, in short, in all the places we spend time, on human emotions have been proven by many studies conducted all over the world. The structure of wood, especially the feeling of being connected to nature, belonging, peace, mental rest, etc. and the natural and warm air it adds to the environments and its important contributions to human psychology are the most important reasons for our preference for wood. Wood is an environmentally friendly choice because it is a renewable natural resource, it can be used without undergoing major processes, it is a renewable and natural building material that can be produced without creating much waste, it does not contain substances that are harmful to health, the amount of fossil energy used in its production is low, it stores CO2 in its structure. Furniture made of synthetic materials usually emit volatile organic compounds and release harmful gases for our health in indoor spaces, they are more prone to the accumulation and spread of allergens such as dust mites. However, natural wood furniture has natural antimicrobial properties that prevent the growth and spread of dust mites. They do not contain harmful chemicals that threaten human health. They absorb gases that pollute the air such as ammonia, nitrogen dioxide, sulfur dioxide and ozone. Their potential to cause allergic reactions is almost non-existent compared to metal and synthetic materials. In addition, natural wood furniture breathes naturally and reduces volatile organic compounds through evaporation, balancing the humidity level in the environment. This provides a cleaner and healthier indoor environment. In short, natural wood does not contain harmful components and contributes to a healthier indoor air. In addition, the carbon footprint resulting from the processing and production of wood is much lower. Relative to its weight, wood is the strongest building material on earth. It is extremely durable and requires very little maintenance. Unlike plastic laminate, MDF, chipboard laminate, other processed woods, synthetic and metal materials, it can have more than one life. This means that other materials can be damaged in a very short time and become unusable, whereas a solid wood product can be renewed many times with little maintenance and can maintain its beauty for years, becoming more aesthetically pleasing each time it is processed and aged.

'The warmth of the wooden light touches your soul'.

reflections from nature

As Biwood, we aim to add light to your environments with the warmth that comes from the naturalness of wood. Because we believe that light is not only a means of illumination, but also an element that shapes our mood. With our designs, we want to create peace, balance and a natural atmosphere in living spaces. By combining sustainable materials and expertly processed natural textures, we want to ensure that light reaches your spaces in its purest form. While we shape our fixtures with precision using the latest technology machines, we believe that a separate spirit is added to each piece with the craftsmanship of our masters. With our continuous inspection and control approach in every operation, we adopt continuous development as a principle in order to raise quality and aesthetics to the highest level for our users.
